

Links 7 HD Broadcast Fibre Systems

Links Broadcast offer HD & SD fibre systems with multiple paths for vision and sound with cable lengths as required, a typical specification is as follows:

The system is configured for the transport of:

- 3 x SD/HD-SDI videos
- 1 x return SD/HD-SDI video
- Bi-directional composite video
- Bi-directional 4 analogue audios
- 4 x serial data 10/100MB Ethernet
- 2x GPI over singlemode fibre cable

The system is housed in a portable mussel shell enclosure for field use and is supplied as standard with 350m fibre cable, additional cable is available to meet OB event specifications.

The remote unit can be powered on V-lock battery eliminating the requirement for mains power at the camera or TX position.
