

Introducing Our Web-link Vehicle...

A simple and cost-effective solution to location based broadband connectivity and live web-streaming services

Our compact and versatile **Web-link** unit is equipped with a Ka band antenna to provide a host of internet based services whilst also offering superb production capability in one complete package. It comes equipped with an HD ENG Camera (technician operated if required) plus an HD Digilink, ENG lighting kit, portable mobile IFB and Freesat off air receiver. Offering a simple solution for immediate web streaming from practically any location.

Broadband and Wi-Fi on location

The unit includes a high powered local Wi-Fi hotspot facility with the first gigabit of data provided free of charge, enabling immediate internet connectivity on location. The Ka band satellite antenna provides high speed links up to 10Mbps; upload or download, backed up by a 4G router for additional resilience. For larger scale events we can provide Wi-Fi network planning and extended Wi-Fi facilities for up to 500 users. So whether it's internet coverage for production personnel on location, public Wi-Fi at a festival or connectivity for conference delegates we have the bandwidth to suit any application.

Production and Streaming Services

Links Broadcast can manage the complete delivery of your web content from camera through to the viewer. Our **Web-link** unit is equipped with an IP encoder enabling immediate connectivity via the web for live streaming of your video content either directly to your own compatible IP decoder or delivered directly to viewers via a content distribution network. Combined with our HD camera, production facilities and camera operation **Web-link** makes it easy and cost effective for you to broadcast to the internet from almost any location.
