## WEB-LINK VEHICLE WITH LIVEU LU600

### A simple and cost-effective solution to location based broadband connectivity and live web-streaming services

Links Broadcast's Web-link vehicle is perfect for broadcasters, production companies, event organisers or anyone requiring location based internet services or web streaming.

Our compact and versatile Web-link unit is equipped with a Ka band antenna to provide a host of internet based services whilst also offering superb production capability in one complete package. It comes equipped with an HD ENG camera (technician operated if required) plus an HD Digilink, LiveU LU600 WiFi or cellular connectivity kit, ENG lighting kit, portable mobile IFB and Freesat off air receiver. Offering a simple solution for immediate web streaming from practically any location.

### Broadband and WiFi on Location

The unit includes a high powered local WiFi hotspot facility with the first gigabit of data provided free of charge, enabling immediate internet connectivity on location. The Ka band satellite antenna provides high speed links up to 10Mbps; upload or download, backed up by a 4G router for additional resilience. For larger scale events we can provide WiFi network planning and extended WiFi facilities for up to 500 users. So whether it's internet coverage for production personnel on location, public WiFi at a festival or connectivity for conference delegates we have the bandwidth to suit any application. For extended coverage WiFi access points can be deployed using facilities such as pump-up masts and ad-hoc temporary towers.

### Production and Streaming Services

Links Broadcast can manage the complete delivery of your web content from camera through to the viewer. Our Web-link unit is equipped with an IP encoder enabling immediate connectivity via the web for live streaming of your video content either directly to your own compatible IP decoder or delivered directly to viewers via a content distribution network. Combined with our HD camera, production facilities and camera operation Web-link makes it easy and cost effective for you to broadcast to the internet from almost any location.
